Greenwood Propagation of Grape
(For Muscadine & Bunch Grapes)

1. Start with actively growing shoots.
   Discard tip and small leaves.
   Cut into 2-node sections using sharp clippers.
   Make top cut above the top node.
   Make bottom cut through the bottom node.

2. 2-node cutting w. bud.
    IMPORTANT: Leaf must remain attached for successful rooting!
    Do all steps quickly!

3. Cutting rooted in mist bed.
   (This process takes about 2 weeks)
   Note: The mist bed should create an area with diffuse light,
   low air flow & high humidity.

4. Transplant cutting to potting soil
   when roots have developed.
